Hi Ludmilla and Elizabeth,

Attached are my presentation slides for this afternoon.

I have had a family situation arise which I need to help with today, which is requiring me to take some time offline, unfortunately. I will most probably miss some of the earlier part of the review, but should make it back to present my slides.

I didn't find anything major, but had some questions for clarification to make sure they are not issues with the dataset. The potential issues are included on slides:

4 aareadme.txt file indicated on line 124 of a backup of this file in the /documents/ directory but I did not find one.

12 Question regarding the FITS HDU structure compared with the SOC ICD

13 Question regarding the WCS in the FITS files. Basically, where is it explained in the docs where the viewer is located?

15 Same issues as 12 & 13 but for the second raw dataset.

Same potentially issues are also for the calibrated dataset nh-a-lorri-3-kem2-v1.0 as stated above.

-Charles

Dear Reviewers,

We would appreciate it if you send your presentations as soon as possible. Our webmaster, Elizabeth Warner, will not be available after noon on Monday, so there will be no opportunity to post your presentations after that.

Thank you.

Ludmilla
