

Kem2 - raw

L-BLK

- +-File type (includes dot)
- .FIT for FITS file
- L-BLK for PDS label
- not part of product ID

+-ENG for CODMAC Level 2 data
 SCI for CODMAC Level 3 data

+-Application ID (ApID) of the telemetry data
 packet from which the data come
 N.B. ApIDs are case-insensitive

+-MET (Mission Event Time) i.e. Spacecraft Clock

+-Instrument designator

Note that, depending on the observation, the MET in the data filename and in the Product ID may be similar to the Mission Event Time (MET) of the actual observation acquisition, but should not be used as an analog for the acquisition time. The MET is the time that the data are transferred from the instrument to spacecraft memory and is therefore not a reliable indicator of the actual observation time. The PDS label and the index tables are better sources to use for the actual timing of any observation. The specific keywords and index table column names for which to look are

- * START_TIME
- * STOP_TIME
- * SPACECRAFT_CLOCK_START_COUNT
- * SPACECRAFT_CLOCK_STOP_COUNT

```
